

Other Widgets

Here are just a few widgets that you can use. If you want to see what parameters are possible in a function call, type **Ctrl + Space**:

- 1. `Checkbox(checkColor: , fillColor: , value: isChecked, onChanged: (bool? value) {},)`
- 2. `ElevatedButton (child: , onPressed: () {})`
- 3. `CircularProgressIndicator()`
- 4. `Slider ()`
More here:
<https://docs.flutter.dev/reference/widgets>

Layouts

To simplify layout management, you can only choose from `Column`, `Row`, or `Box`.

- 1. `Column` lays out elements from top to bottom.
- 2. `Row` lays out elements from left to right.
- 3. `Stack` lays out elements vertically, from first at the bottom, and then everything else is laid on top of the previous items.
